INVENTORY
CONTROL
AT YOUR FINGERTIPS

Verrfied's smart RFID gives you a future-proof edge. Boost sales, slash costs, and gain real-time visibility.

www.verrfied.com

GAIN YOUR
VERRFIED EDGE

Verrfied offers you an unbeatable edge, transforming operations through smart RFID. We don't just track assets; we install a future-proof nervous system for your operations, delivering real time inventory intelligence. This strategic visibility dramatically eliminates errors and bolsters the accuracy of your pick, pack, and dispatch processes. Our advanced control system transforms stock management, enabling you to conduct rapid, high-frequency audits with unprecedented resource efficiency. This newfound operational agility doesn't just save time; it facilitates effortless scaling and delivers measurable shareholder value: anticipate a 3-5% net increase in sales revenue and a stunning 10-20% reduction in total operating expenditures.

UNLOCKING
INVENTORY VALUE

Manual and barcode systems typically limit global inventory visibility to a risky 65% to 70%. This inherent "blind spot" is a significant financial drain, trapping 20% to 30% of valuable, unlocatable stock.

Verrfied's RFID nervous system solves this by instantly elevating visibility to 95%+. This clarity automatically unlocks dead inventory, converting tied-up assets into instant, incremental sales. The result is a proportionate reduction in necessary working capital, creating a leaner, more financially agile operation.

SMART TOOLS DELIVER INVENTORY INTELLIGENCE

The power of Verrfied is rooted in a sleek, scalable hardware and software suite designed for seamless integration. These are the essential building blocks that create your real-time inventory nervous system

SCANNING TOOLS

Powerful Handheld Devices for on-the-go checks and a robust 4 Port Reader for fixed area monitoring.

ITEM IDENTIFICATION

RFID Tags designed to stand up to your operating environment, giving every product a digital voice.

DATA COMMAND CENTER

Specialized Software & Middleware that organizes the data and integrates seamlessly with your existing enterprise tools.

UNPACKING RFID THE MECHANISM OF REAL-TIME INVENTORY

At its core, RFID is a sophisticated technology that ensures precise, instantaneous data capture for inventory management. Its efficiency stems from four essential building blocks.

RFID Readers

The signal emitters. These fixed or handheld devices generate radio waves to power and communicate with the tags, acting as the primary data collection points.

RFID Tags

The identity carriers. Embedded with microchips and antennas (inlays), they hold unique product data and transmit this information wirelessly upon activation. Available in passive, semi-passive, and active forms to suit various environments.

ANTENNAS

The communication bridge. They convert the electrical energy from the reader into broadcastable radio waves, and conversely, convert the tag's radio wave response back into usable electrical data.
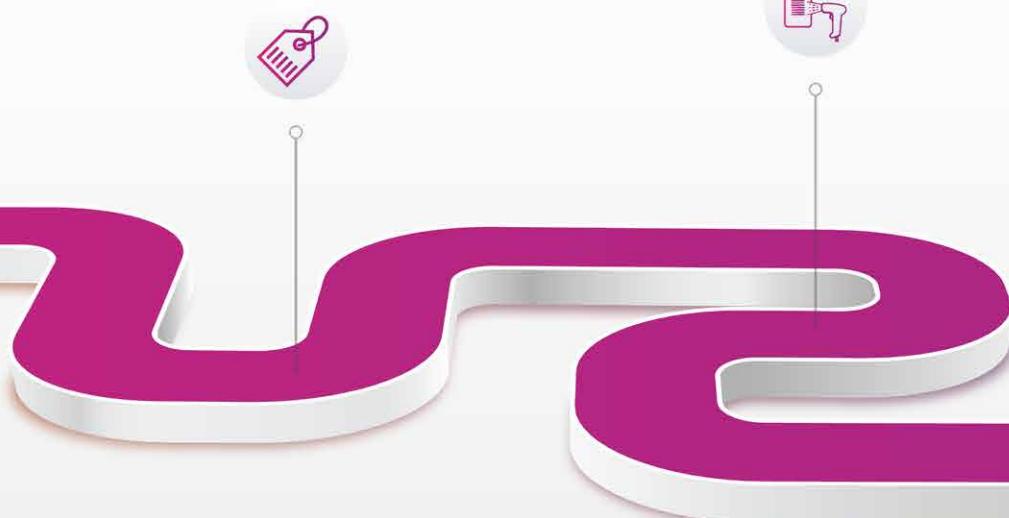

SOFTWARE & MIDDLEWARE

The integration layer. This specialized application handles the massive volume of raw RFID data, filters it, and pushes actionable inventory intelligence directly into your existing enterprise software.

THE VERRFIED RFID INVENTORY WORKFLOW

We turn physical inventory movement into actionable data through a clean, automated four step cycle.

PRODUCT TAGGING

Products are instantly assigned a digital identity via RFID tags during manufacturing, distribution, or stock inward.

TAG READING

Readers strategically placed at checkpoints automatically capture tag data as products move through facilities—no manual scanning needed.

DATA PROCESSING

Middleware & Software instantly filters, cleans, and processes the raw tag data, transforming noise into usable, reliable information.

SYSTEM INTEGRATION

The processed intelligence integrates seamlessly with your existing ERP and inventory management systems, providing real-time visibility where you need it most.

QUICK CONTACTLESS RFID INVENTORY SYSTEM, ANTI-THEFT PROTECTION. FOR ANY WAREHOUSES AND ASSETS

Theft try

ALERT ABOUT UNAUTHORIZED REMOVAL / TAKEAWAY

AUTOMATIC REGISTRATION OF EVENTS, PRINTING WAYBILLS

EACH PRODUCT IS EQUIPPED WITH AN RFID UHF TAG

QUICK CONTACTLESS INVENTORY = 12FT

THE SHIFT FROM SLOW TO SMART

BARCODE

VERRFIED RFID

Needs line of sight manual, tedious work.

Scan without seeing—no line of sight required.

Limited items read per minute

1000+ items read in under a minute.

High room for human errors and poor data integrity.

System-controlled accuracy for less error-prone processes.

Poor traceability and compromised inventory accuracy

Enhanced traceability and real-time inventory accuracy.

Leads to high labor costs and resource drain.

Minimal labor costs and optimized staffing.

THE VERRFIED PROMISE AGILITY, SUPPORT, AND SAVINGS

Beyond real-time inventory intelligence, Verrfied delivers a complete, secure, and future-proof solution designed for your success:

ALWAYS SUPPORTED, ALWAYS RUNNING:

We provide comprehensive Annual Maintenance Contracts (AMC) and dedicated Customer Support. Your RFID nervous system will operate optimally 24/7, guaranteed.

PLUG & PLAY PRECISION

Achieve Seamless Integration with your current infrastructure. Verrfied's architecture is built to communicate effortlessly with your existing ERP and management systems.

BUILT FOR TOMORROW'S GROWTH

More than just a tool, Verrfied is the Practical Solution for Scaling. Increase throughput, manage more assets, and expand your operations without friction or system limitations.

EFFICIENCY THAT LASTS

Maximize your long-term ROI with Less Recurring Costs. Automated processes dramatically reduce the dependence on constant, expensive manual checks and software maintenance.

KEY BENEFITS
THE VERRFIED FINANCIAL IMPACT

The shift to smart RFID isn't just operational—it's a direct boost to your bottom line, quantified:
